2. Period comparison options
3. Refresh the data after selection
4. Changes the data displayed in the chart at the top
5. Number of devices to display in the chart at the top
6. Select the columns to be displayed in the table below
7. Opens the options window below the chart
8. Search the table by device name
9. Sort the table by the data in the column
10. Odometer as reported by the vehicle computer at the end of the time period selected. Not all devices or vehicles provide this.
11. Distance traveled during the selected time period. This is based on the vehicle odometer if available. If not, GPS distance is used which will vary in accuracy based on many factors.
12. Gallons of fuel used during the selected time period as reported by the vehicle.
13. Fuel economy as reported by the vehicle. This is not available from all OBD devices, 3-wire installs or asset trackers.
14. Idle time over 300 seconds (>5 minutes)
15. Idle time under 300 seconds (<5 minutes)
16. Engine hours (run + idle) as reported by the vehicle.
