MyFleetistics
Device Status Table

The **Device Status Table (DST)** look at all GPS devices integrated into the MyFleetistics portal (Geotab, Fleetistics ONE, Fleetistics LITE, etc). The table is designed to help you see the status of your devices at a glance and easily submit a support ticket if a device is not reporting correctly.

There may be a difference between what the DTS reports and other GPS platforms. The DTS includes devices that are in your account that may not have been installed. Where Geotab does not include devices that have not reported at least one time.
