Application

How do I share real time fleet data with my team so they can see it on iPhones and Desktop computers?

There are several ways to share data depending on the GPS platform and data to be shared. Common sharing methods include:

1. Schedule reports to be emailed on a regular basis; daily, weekly or monthly.
2. Give employees access to the portal but with limited access rights.
3. Create a sharing link which shows the vehicles location on a map but does not share other information

Contact Fleetistics training for assistance in setting up your sytem.
