

MyFleetView

MyFleetView Pro

MyFleetView Pro enables customers to create custom URLs with specific vehicle data. The URLs can be controlled by the variables listed below. These URLs can be shared with customers, used on your website or provided to employees in a dispatch center who are only concerned with a specific group of vehicles. The URL only contains the last reported location of the vehicle by design. If you need historical data go to the GPS system application.

The links can be deactivated or globally deleted at any time by an account admin. iFrame code is provided in case you want to embed the links on your website. [Click this link](#) to view it our fleet on our website.

Control Variables:

1. Device(s)
2. Time of day
3. Day of week
4. Specific end date

An example of a practical application for this feature is an exotic car being shipped across the USA. You want to provide a link to the customer to monitor the location of the car hauler but would like to give the customer access to the trucks location and expire the link the day the vehicle is delivered. This allows the customer to monitor the location of their vehicle while in route.

Embed Code for Website:

```
<iframe width="560" height="315" src="https://XXXXXXXXXXXXXXXXX"
allowfullscreen></iframe>
```
