

ELD, DVIR, IFTA

Can the DVIR inspection list and defects be customized?

Yes. This can be updated in the database directly, or the Import DVIR List tool allows you to copy and paste a list from Excel into the Geotab system. Each line must be formatted in the form "part|defect|severity" in order for a successful import. Once uploaded, navigate to Administration > System > System Settings. From the General tab, scroll down to "Default Vehicle Defects List". Select your new list and click Save when complete.
