

Application

Using the Speed Profile in accident reconstruction in Geotab.

Speed Profile

The Speed Profile shows the speed of the vehicle on a graph. This can be used to accurately determine the speed of the vehicle in question at the time of the accident. This can be done by clicking on Drivers & Activity> Speed Graph. Below is the speed profile of the vehicle in the accident. We can see that during the time of the accident the speed of the vehicle was 0 meaning the vehicle went to the intersection and waited for traffic to pass before entering the road.
