Watchdog report - Minutes

Watchdog Report by Minute Keeping track of telematics device health is an important task that's often overlooked. Manage device uptime with the Watchdog Report. Devices are tested throughout the day to ensure they are communicating via the cellular network and accurately recording trips made by fleet drivers and their vehicles. This version of the Watchdog Report allows you to monitor communication status minute by minute as compared to the default report. See which devices have been offline for 5-30 mins, 30-60 mins, and 60+ mins. The email setting makes it possible to have this fleet management report sent direct to your inbox when device communication is delayed longer than 5 minutes. Save the report to your desktop, customize and upload to your Geotab account.
