How often does a Fleetistics LITE device update?

The devices on the Lite platform update at various rates ranging from 1 minute to several hours depending on the device application. Vehicle devices update every 1 minute where battery powered assets update every few hours to conserve battery life. The vehicle profile also logs information based on changes in speed and direction to provide more accurate track data. This same method for a bulldozer would create data that would be difficult to view and read in reports.
