How often does a FleetisticsONE device log position data?

FleetisticsONE offers several configurations dependant on the targeted application, the device, and the device model. A typical vehicle tracking device updates once per minute or more frequently in urban environments. Devices utilized for equipment or asset tracking are programmed differently and generally update less frequently. Ask your account manager for more details on your specific devices. FleetisticsONE devices include: AT, XT, MT, and VI devices. GO Series devices from Geotab are not included.
